Beyond CLOUD ACCESS, We Grant CONFIDENCE

The integration of Millennium **Ultra** with Milestone XProtect creates a powerful synergy, combining top-tier access control security with industry-leading video monitoring capabilities. This integration offers an intuitive interface that grants full access to live video and recording, effectively transforming the access control system into a comprehensive video security solution. By merging these two systems, users can enjoy the same high-level performance, all on a single screen with one login. This streamlines operations, saving time and effort for efficient facility monitoring, incident investigation, and security response.

FEATURES

What is the Milestone XProtect Software?

XProtect is GDPR-ready IP video management software (VMS) designed for large-scale, high-security installations. It ensures end-to-end video integrity and boosts system performance with hardware-accelerated video decoding. XProtect offers central management of servers, cameras, and users in multi-site setups, along with an integrated video wall for supreme situational awareness. It supports failover recording servers, making it ideal for mission-critical installations. With a recording rate of minimum 3.1 Gbit/s, XProtect suits 24/7 operation requirements.
